

Kevin Adams, founder of the Digital After Dark® blog, worked with Rosco to assemble a kit of lighting filters specifically for use after the sun has set. The kit contains one piece each of 27 different color filters that will help you create dramatic, nighttime lighting effects.

- Blue filters, including some CTB's, for creating cool-lit lighting effects, such as moonlight or enhancing water or ice elements in your shot.
- Yellow, straw and orange filters for enhancing interior light, fire/candle light and for balancing your strobe to street lights.
- A generous variety of vibrant effect colors for light painting or enhancing other light-elements in your shot such as neon signs or stop lights.

PRODUCT INFORMATION

Size: 12" x 12" (30.48 cm x 30.48 cm) one each of 27 different filters
