

These large backdrops provide a solid-colored background for photography, video, and television studios. They feature grommets at the top for attaching to a track or pipe/truss, and a weighted pipe pocket at the bottom. Rosco Cycloramas can be constructed using fabric or PVC vinyl and are available in a number of different colors including white, grey, black, sky blue, and chroma key green & blue. Light-colored cycloramas can be lit in different colours to create vibrant hues in the background, and the PC vinyl drops can also be used as front or rear-projection screens for gobo and video projections.

The chroma key green and blue cycloramas are an excellent choice for any studio that needs a digital compositing solution for virtual production. Rosco Cycloramas can also be used to create an “infinity background” or “infinity wall” by pulling the bottom of the cyc out to curve onto the floor. This creates a background that appears seamlessly endless to the viewer when framed properly in camera.

Our construction includes heavy webbing sewn along the top with grommets and ties for attachment, a pipe pocket at the bottom to slide in lead rope or tube and hemmed finishing on the sides. It can also be custom made to your requirements with no size limits. Seamless backdrops are manufactured with wide seamless fabrics such as Muslin. If seams are required then they are made vertical from a wide range of fabrics.

*Chroma Key Green cyclorama.*

## **Muslin**

- Weight: 200 g/m<sup>2</sup>
- Width: 3.20m, 6.20m and 10.15m
